

We are seeking **highly experienced engineers** across multiple disciplines to support a critical technical assessment of a major oil refining facility in the Middle East. The engagement will occur in **two phases**:

- **Phase 1:** On-site field trip to assess an existing oil asset, including plant condition, operational performance, risks, and improvement opportunities. Deliverables include detailed technical reports and recommendations.
- **Phase 2:** Execution support based on Phase 1 outcomes, including implementation advisory, design input, and operational enhancements.

Open Roles:

We are specifically looking for the following expert profiles:

1. **Senior Mechanical Engineer**
2. **Senior Process Engineer**
3. **Senior Electrical/Control Systems Engineer**
4. **Senior Civil Engineer**
5. **Asset Integrity Engineer**
6. **Process Safety Engineer**

Minimum Requirements (All Roles):

- **15+ years of experience** in oil refining operations (or equivalent downstream oil & gas environment).
- Demonstrated track record in **asset evaluation, audits, or turnaround projects**.
- Comfortable working in fast-paced, high-stakes environments.
- Able to travel to the Middle East on short notice.
- Strong written and verbal communication skills for technical reporting.

Please submit your proposal (bid) for this opportunity on [GigExecs.com](https://www.gigexecs.com) or get in touch via help@gigexecs.com
